Re: AI Engineer, Applied Models

Gating model releases on evals is how I already work. Signalcast, my open-source harness, runs regression suites in CI with failures tagged by slice; it caught a 9-point recall drop before it merged.

On the serving side, I quantized and served CLIP-family checkpoints for my research lab, and I have chased enough latency at Brightpath to respect a tokens-per-second budget.

Honest model cards are the part of your posting I like most. Quality claims with receipts are the whole point of my work so far.

Sincerely,

Jane Doe
